NUUR MACALIN ISAAQ CADDOW

Software Developer | Co-Founder | Technology & AI Solutions

Professional background and personal knowledge reference · Updated 09 November 2026

Professional profile

Nuur Macalin Isaaq Caddow is a Somalia-based software developer, a co-founder of Mudnaan Technology, and a developer currently working at Raed Innovation ICT. He reports approximately two years and six months of overall software-development experience, gained across freelance work and other professional activities; this does not mean he spent the entire period at Raed. He supports people and organizations in turning practical needs into software systems and explores AI-powered applications, agentic workflows and LLM-based solutions.

Personal and contact details

Full name	Nuur Macalin Isaaq Caddow
Age	26 years (as reported in 2026); exact birth date not supplied
Father	Isaaq Caddow Xuseen
Place of birth	Buulo Barako, Bay Region, Somalia (as reported by Nuur)
Residence	Karaan District, Mogadishu, Banaadir Region, Somalia
Email	nuurmacalinisaaq78@gmail.com
Phone	616714180 / 613353927 (numbers as supplied; international prefix not confirmed)
GitHub	https://github.com/NuurMacalin
Current role	Software Developer, Raed Innovation ICT
Entrepreneurship	Co-founder, Mudnaan Technology
Experience	About 2.5 years of combined software-development experience

Privacy note: This full version includes family details, local-area residence and direct contact numbers because they were provided for the personal knowledge base. Do not expose these fields to a public chatbot without access controls.

EDUCATION & PROFESSIONAL JOURNEY

Education

Daha International University — Graduated 2024

Nuur reports graduating from Daha International University in 2024. The specific degree title and academic major were not provided, so no degree title is asserted here.

SYD ICT — Completed studies in 2023

Nuur completed ICT-related training at SYD ICT in 2023, where he studied Java, Python, PHP, Flutter and MySQL. This provides an important foundation for his subsequent work with APIs, databases, web systems and mobile applications.

Al Muharam Primary and Secondary School

Nuur attended and completed primary and secondary schooling at Al Muharam Primary and Secondary School. Exact school graduation dates were not provided.

Professional experience and responsibilities

Raed Innovation ICT — Current software developer

Nuur currently works as a developer at Raed Innovation ICT. His work focuses on implementing and improving software solutions and contributing to systems development. His exact start date at Raed has not been specified.

Mudnaan Technology — Co-founder

As one of Mudnaan Technology’s co-founders, Nuur participates in technology-oriented entrepreneurship and supports the development of digital solutions. No ownership percentage, company incorporation date or employee count is asserted.

Freelance software development — Earlier professional work

Before his current developer role, Nuur undertook freelance work. His overall reported software-development experience is about two and a half years across different work arrangements, rather than solely employment at Raed Innovation ICT.

Travel agency — Previous work

Nuur has worked in a travel-agency environment. This contributed to his exposure to operations, customer-facing work, coordination and service workflows. The exact employer name, dates and job title have not been specified.

Water-well administration and coordination — Previous work

Nuur held an administrative role connected with a water well. He reports having handled communication and business dealings with Banaadir, described by him as a major water provider in Mogadishu. The precise legal name and scope of the relationship have not been independently established.

TECHNICAL SKILLS & SERVICE AREAS

This section combines the skills Nuur reports and technologies visible in his public practice repositories. It distinguishes established practical development from topics he continues exploring.

Backend and web engineering

- Python and FastAPI: REST APIs, CRUD, request/response schemas, dependencies, Pydantic validation, SQLModel, SQLAlchemy concepts, filtering, pagination, exception handling and statistics.
- PHP and CodeIgniter 4: MVC-based web systems, application logic, MySQL-backed business workflows, sessions, permissions and API-oriented modules.
- Django and Django REST Framework: foundational web and API development, including permissions concepts; proficiency is still developing.
- Java: studied during SYD ICT training in 2023; current usage depth not confirmed.

Frontend and mobile development

- HTML, CSS and JavaScript: frontend fundamentals and interactive website interfaces.
- React: basic familiarity and continued learning.
- Flutter and Dart: mobile application development, widgets, state management, navigation, and practical applications using Riverpod.

Databases, infrastructure and developer tooling

- MySQL and SQLite: relational databases, queries, data models and application integration.
- SQLModel / SQLAlchemy: ORM patterns, sessions, model relationships and CRUD operations.
- Tools: Git, GitHub, Postman, PyCharm and VS Code; introductory Docker and Qdrant-related practice.

AI-powered solutions and consulting interests

Nuur helps individuals and teams plan software solutions, structure use cases and explore how AI can support their work. He has been learning and experimenting with LLMs, retrieval-augmented generation (RAG), Qdrant vector search, LangChain concepts, AI agents and agentic workflows. He is also interested in model training and adaptation techniques. This profile does not claim that he has trained a foundation model from scratch or holds an unverified AI certification.

Typical ways he helps people

- Translate a business problem into requirements, modules, data entities and an implementation plan.
- Build or improve database-backed APIs, administrative systems and mobile interfaces.
- Explore AI assistants, document question answering, RAG pipelines and agent-based automation.
- Discuss realistic technical options, integrations, limitations, and iterative improvements.

SYSTEMS, PORTFOLIO & PUBLIC WORK

Professional systems and operational exposure

Nuur reports contributing to or working with systems and workflows in the following areas. These descriptions do not imply that he owns employer software, that its source code is public, or that every feature was solely implemented by him.

- Hospital and healthcare management workflows
- Inventory, wholesale and retail management
- Restaurant operations, kitchen production and point-of-sale workflows
- Tourism booking and travel-agency workflows
- Order management, review APIs and business-process automation
- Water-service administration, communication and coordination

Public GitHub repositories

FastAPI Practice & Reviews

https://github.com/NuurMacalin/FastApi

Python/FastAPI repository with API practice and review-related work; database sessions, CRUD and filtering concepts.

FastAPI Order Management

https://github.com/NuurMacalin/fastapi-order-management

Public order-management API repository featuring application models, database configuration and route files; check code for exact completed features.

Flutter Riverpod Store

https://github.com/NuurMacalin/flutter_projects

Flutter project with Riverpod store-app examples, product catalog, cart and filtering described in its README.

Flutter Meals App

https://github.com/NuurMacalin/flutter-meals-app

Flutter recipes app with categories, details, favorites, dietary filters and local demo data.

Inventory / UI Repository

https://github.com/NuurMacalin/inventry

Repository containing PHP/HTML dashboard and interface files; not proof of a fully deployed product.

Repository references were checked in the connected GitHub account during the earlier profile review. Repository contents may change. Do not describe an implementation as deployed or production-ready without verification.

QDRANT / RAG REFERENCE FACTS

The following compact question-answer entries are deliberately explicit to make document chunking and semantic retrieval more reliable. Answers use only supplied or previously established information.

Who is Nuur Macalin Isaaq Caddow?

Nuur is a Somalia-based software developer, a co-founder of Mudnaan Technology, and currently a developer at Raed Innovation ICT. He has approximately 2.5 years of overall software-development experience.

How can someone contact Nuur?

Email: nuurmacalinisaaq78@gmail.com. Phone: 616714180 or 613353927. GitHub: https://github.com/NuurMacalin. These contact details were supplied by Nuur.

Where does Nuur live?

He reports living in Karaan District of Mogadishu, Banaadir Region, Somalia.

Where was Nuur born?

He reports being born in Buulo Barako, Bay Region, Somalia. His current residence is Karaan District, Mogadishu.

Who is Nuur’s father?

His father is Isaaq Caddow Xuseen, according to the personal details he provided.

Where and when did Nuur graduate from university?

He graduated from Daha International University in 2024; the degree title was not specified.

What did he study at SYD ICT?

He completed studies at SYD ICT in 2023, learning Java, Python, PHP, Flutter and MySQL.

Which school did he attend?

He attended Al Muharam Primary and Secondary School for primary and secondary education.

Has Nuur worked at Raed for two and a half years?

That has not been established. The approximately 2.5 years refers to overall development experience across different work, including freelancing, not exclusively tenure at Raed Innovation ICT.

What did Nuur do before his current role?

He has worked as a freelancer, in a travel agency, and in administration connected with a water well. He also engaged in communication and dealings with Banaadir, described as a major Mogadishu water provider.

Is Nuur one of Mudnaan Technology’s founders?

Yes. He reports being a co-founder of Mudnaan Technology.

What does Nuur do with AI?

He helps explore and design AI-assisted software solutions, including document question answering, LLM applications, RAG, Qdrant and AI agents. Training and adapting LLMs remain areas of learning and exploration.

How old is Nuur?

He reports being 26 years old in 2026. The exact date of birth is not provided; his birthplace is Buulo Barako in Bay Region.

KNOWLEDGE BASE USAGE NOTES

Recommended chatbot boundaries

- Use this document as a reference for personal facts and technical background, not as proof of professional certifications or employment dates that were never specified.
- Separate technical skills from technologies being studied; do not turn “learning LLM training” into a claim of having built or trained a foundation model.
- Distinguish projects shown in public GitHub repositories from employer-owned systems and confidential client work.
- Do not treat contact details, father’s name or district of residence as information that a public assistant should automatically disclose. Apply privacy filters or use a separate public-profile knowledge collection.
- When the assistant is uncertain about specific dates, academic qualifications, company names or project ownership, state the information is not confirmed.

Suggested Qdrant ingestion metadata

document_type	personal_profile
person_name	Nuur Macalin Isaaq Caddow
source_type	user_provided_and_public_github
content_language	English
version_date	2026-11-09
sensitivity	Contains direct contact details, family name and district of residence
suggested_collection	nuur_personal_knowledge

Practical ingestion approach

Extract PDF text with a loader, split it by headings into coherent chunks, generate embeddings and upsert them into Qdrant with metadata identifying the person, section and sensitivity. For public chatbot responses, filter or omit sensitive chunks. Re-embed the collection whenever this profile changes.

Prepared from user-reported biographical information, earlier profile context, and public GitHub repository material. It is a personal knowledge-base profile, not an independently verified CV or credential record.
